

**Transparency**

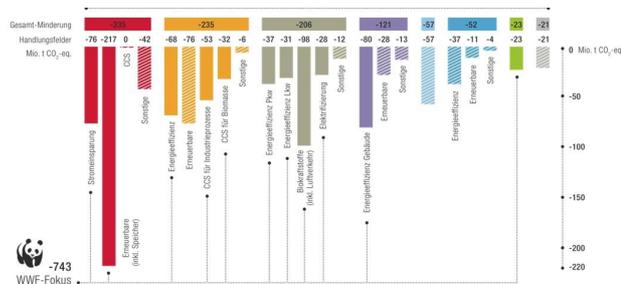

**Participation**

**Acceptance**

**RGI Workshop, Berlin  
October 17th, 2011**

**Infrastructure with a goal: Decarbonized power sector by 2050**

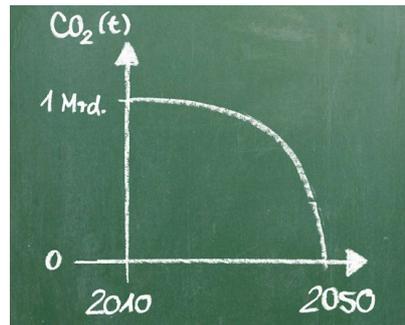

### Thesis 1: Transparency is in the interest of TSOs

- Announce
- Discuss
- Decide

- Decide
- Announce
- Defend

### Thesis 2: Participation is a prerequisite for acceptance

- Process: EnWG § 12 Konsultation

Deutsche Umwelthilfe

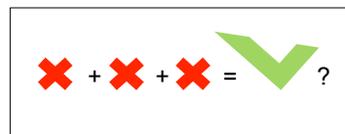

### BNetzA Consultation Scenarios 2022 and 2032: How serious are we about transparency?

- Consultation § 12 EnWG by BNetzA
- Scenarios copy pasted from a Working Group @ BMWi headed by dena
- Very little explanation and context
- Over 80 written assessments of Scenarios
- Two main aspects:
  - Likely developments
  - Climate and energy policy goals of German Government taken into account
- Avoid Mistakes of dena II study

### Decarbonisation along the value chain ?

- Decarbonisation is not (yet) at the center of process:
  - Planning / calibration ✗
  - Engineering ✗
  - Authorization ✗
  - Regulator ✗
  - Cost acknowledgment ✗
  - TSO ✗
  - ENTSO-E ✗
  - ACER ✗

- Outcome is unlikely to be sustainable

## NGOs/RGI as partners

- Acceptance
- Regulatory / institutional design within climate goals

+

100% renewables and 80/95%  
GHG reduction

**Many thanks for the attention**
