

Conflict Mapping of Birds and Medium-voltage Electricity Grid in Hungary

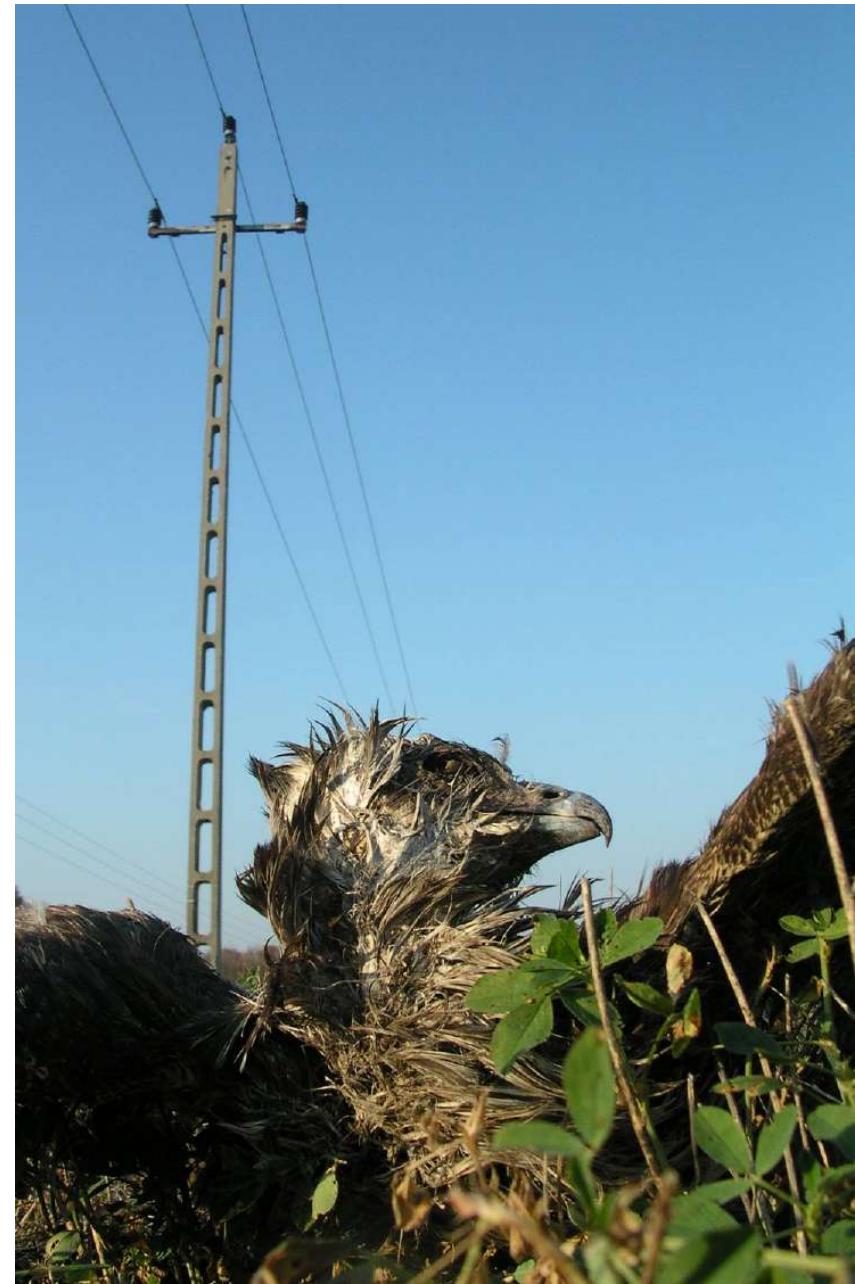

Márton Horváth, Szabolcs Solt,
Károly Nagy & Péter Tóth
MME BirdLife Hungary

Connecting Biodiversity - Reconciling nature and the electricity grid
8-9 November 2023, Berlin

INTRODUCTION

- 1983-2002: Facing the problem, first mitigation measures (Bagyura et al.)
- 2003-2007: Large scale surveys, large scale mitigation measures (Demeter et al.)
- 2008: Accessible Sky Agreement and the 1st Conflict Map (Horváth et al.)
- 2009-2023: Newly developed pole structures and many more... (Solt et al.)

Csávoly, 16 October 1983

János Bagyura

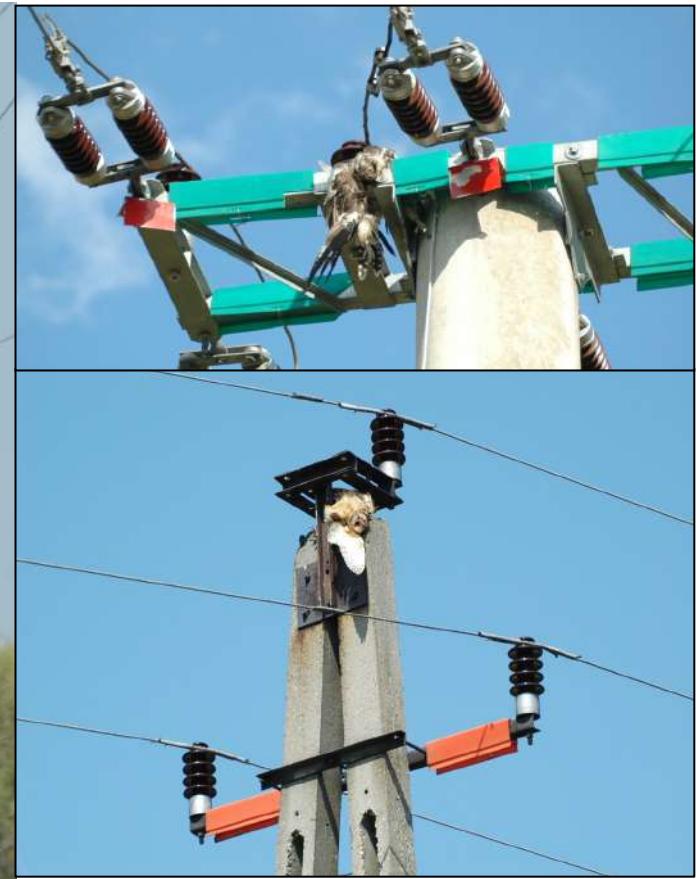

10 pylons:

4 buzzards, 5 kestrels, 1 red-footed falcon, 3 hooded crows

„Cross-arm insulation” program 1989-2002

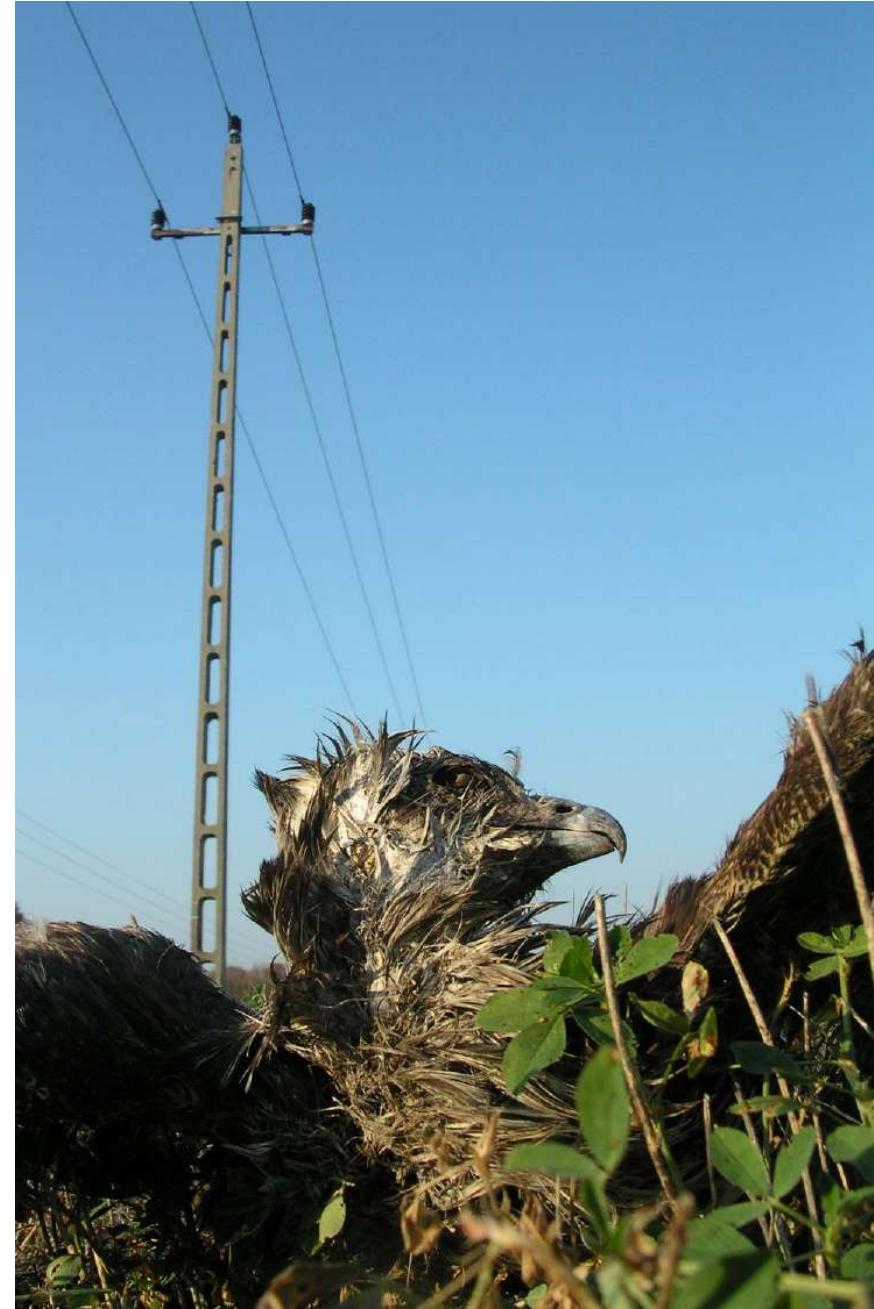

„Cross-arm insulation” program 1989-2002

- The crossarms of ca. 32'000 pylons had been covered till 2003 (ca. 5% of all medium-voltage pylons)
- Decreased mortality, BUT it was a temporary & not perfect

INTRODUCTION

- 1983-2002: Facing the problem, first mitigation measures
(Bagyura et al.)
- 2003-2007: Large scale surveys, large scale mitigation measures
(Demeter et al.)
- 2008: Accessible Sky Agreement and the 1st Conflict Map
(Horváth et al.)
- 2009-2023: Newly developed pole structures and many more... (Solt et al.)

Electrocution of birds on medium-voltage pylons

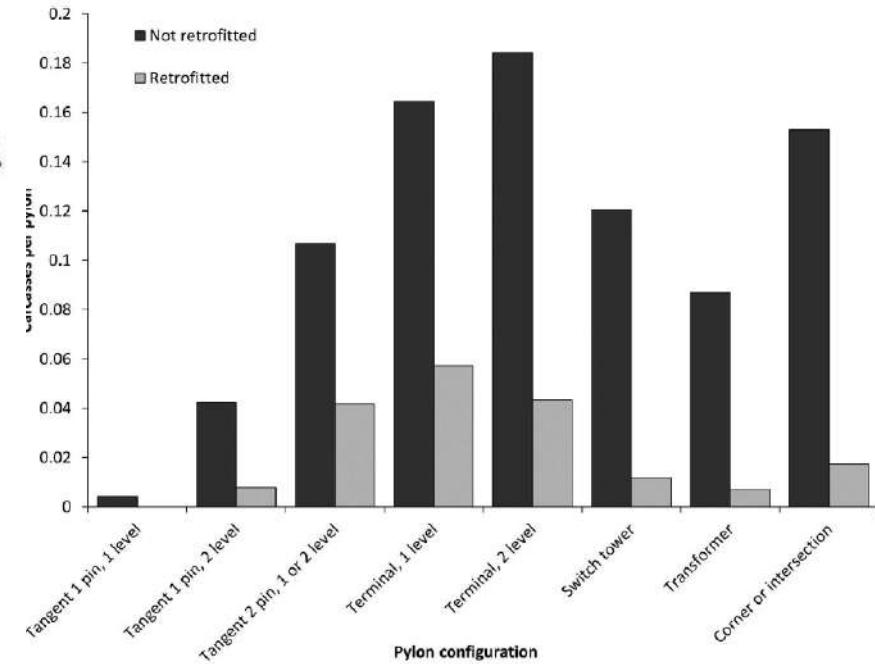

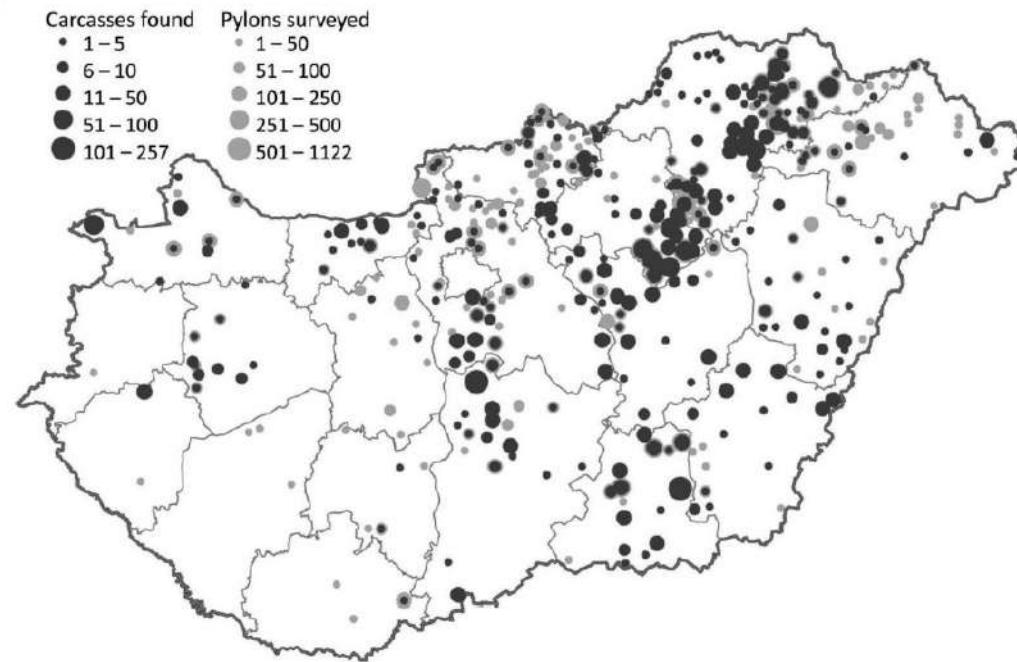

- Large scale national surveys
- MME and ranger service
- 2004-2014
- Results:
 - >200 participants
 - 57,486 pylons surveyed
 - 3,400 carcasses
 - 79 species

The Wilson Journal of Ornithology 130(3):600–614, 2018

Documenting and reducing avian electrocutions in Hungary: a conservation contribution from citizen scientists

Iván Demeter,¹ Márton Horváth,¹ Károly Nagy,¹ Zoltán Görögh,¹ Péter Tóth,^{1,4} János Bagyura,¹ Szabolcs Solt,¹ András Kovács,³ James F. Dwyer,^{2,*} and Richard E. Harness²

INTRODUCTION

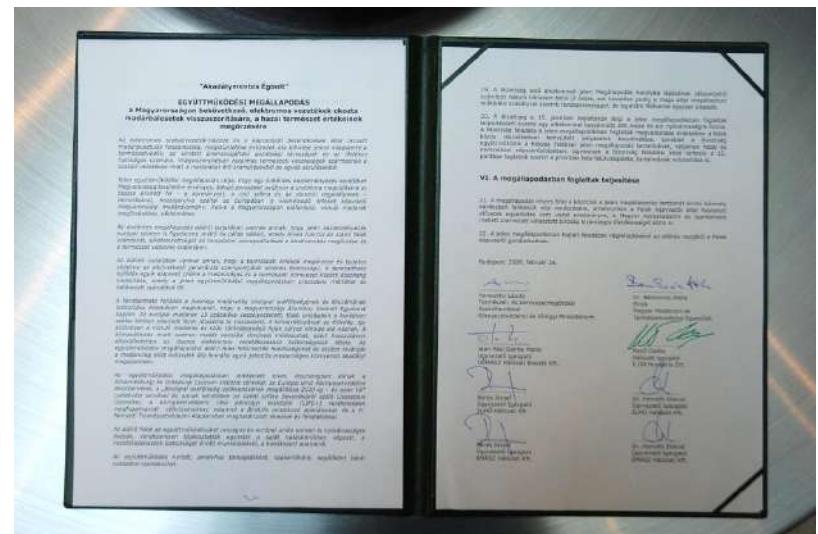

- 1983-2002: Facing the problem, first mitigation measures (Bagyura et al.)
- 2003-2007: Large scale surveys, large scale mitigation measures (Demeter et al.)
- **2008: Accessible Sky Agreement and the 1st Conflict Map (Horváth et al.)**
- 2009-2023: Newly developed pole structures and many more... (Solt et al.)

Accessible Sky Agreement

26 February 2008

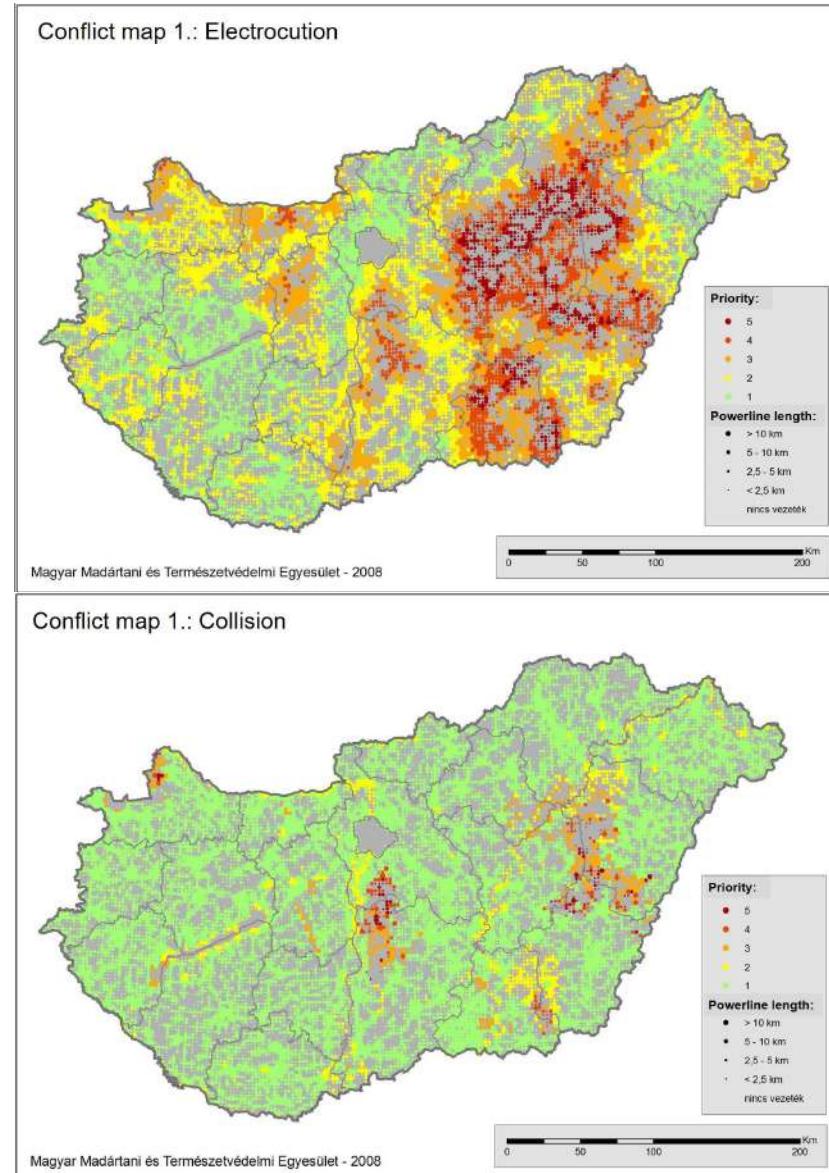

- Signed by:
 - Ministry of Agriculture
 - Electric companies
 - MME
- Voluntary agreement
- Political initiation
- Declares to „eliminate the problem by 2020”
- No prior planning
- No realistic objectives

Agreement between Ministry of Environment and MME BirdLife Hungary August-November 2008

A. Development of conflict maps for locating the most critical areas of bird and power line interactions (electrocution + collision)

B. Development of a possible time-frame for bird-friendly modifications

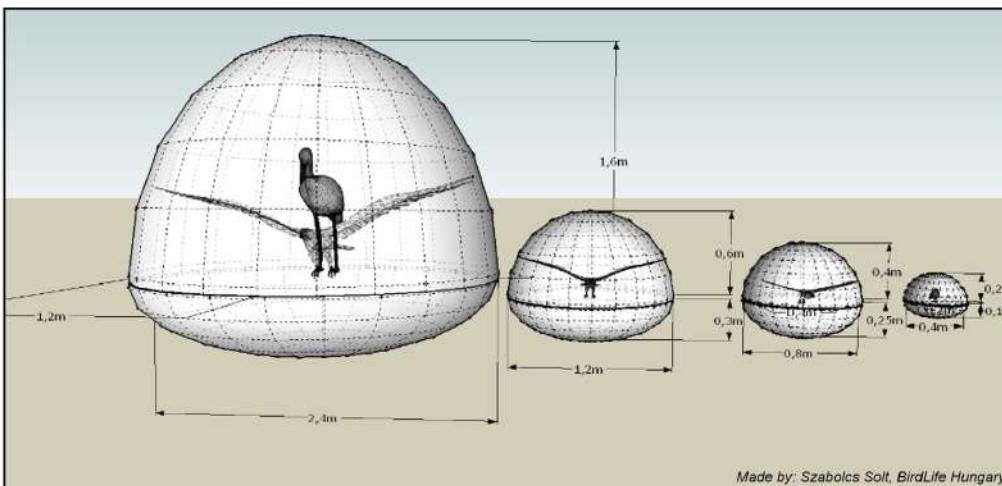

INTRODUCTION

- 1983-2002: Facing the problem, first mitigation measures (Bagyura et al.)
- 2003-2007: Large scale surveys, large scale mitigation measures (Demeter et al.)
- 2008: Accessible Sky Agreement and the 1st Conflict Map (Horváth et al.)
- 2009-2023: Newly developed pole structures and many more... (Solt et al.)

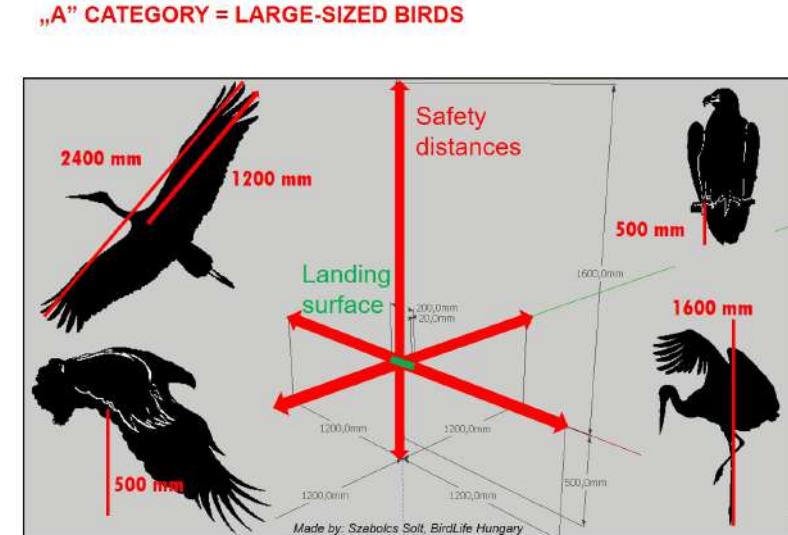

Recent activities

- 3D modelling and development of new, bird-friendly pylon types in cooperation with engineers & electric companies
- Focused and repeated field surveys
- Legal procedures for mitigation measures in case of detected mortality

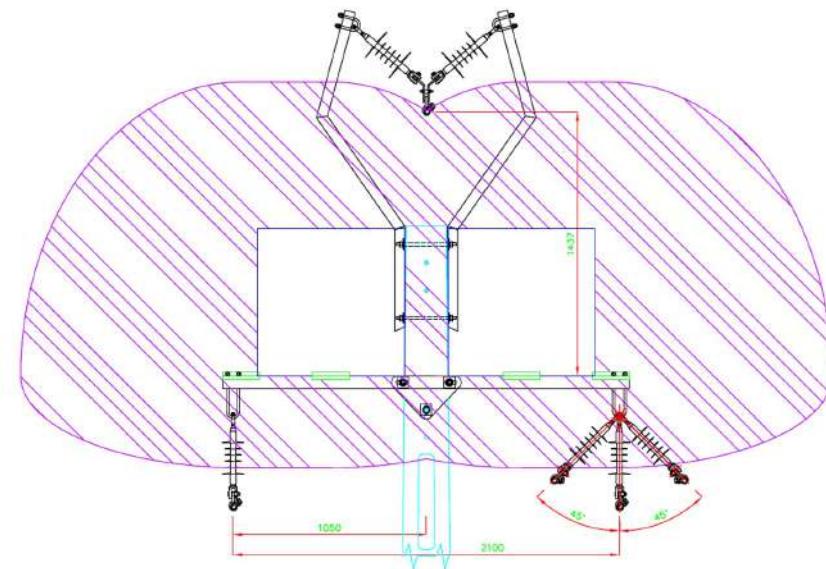

Modelling critical safety spaces and distances
(Prevention of phase-to-phase and ground-to-phase short-circuits
on mid-voltage electric pylons)

Critical safety spaces and distances
(Prevention of phase-to-phase and ground-to-phase short-circuits
on mid-voltage electric pylons)

New Mid-voltage pylon type designs in Hungary using the
3D Modelling of MME/BirdLife Hungary – 1.

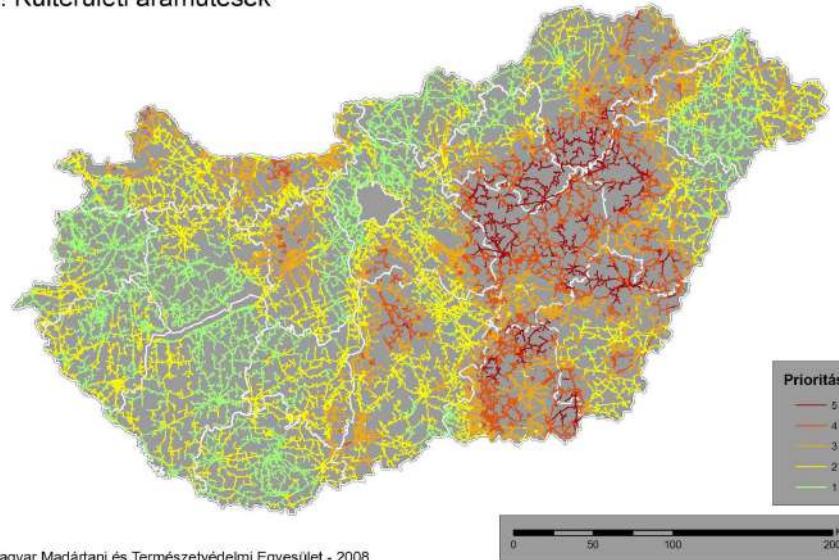

Objective

**Revision of the
„Conflict map” 1.0 (2008)**

2020:

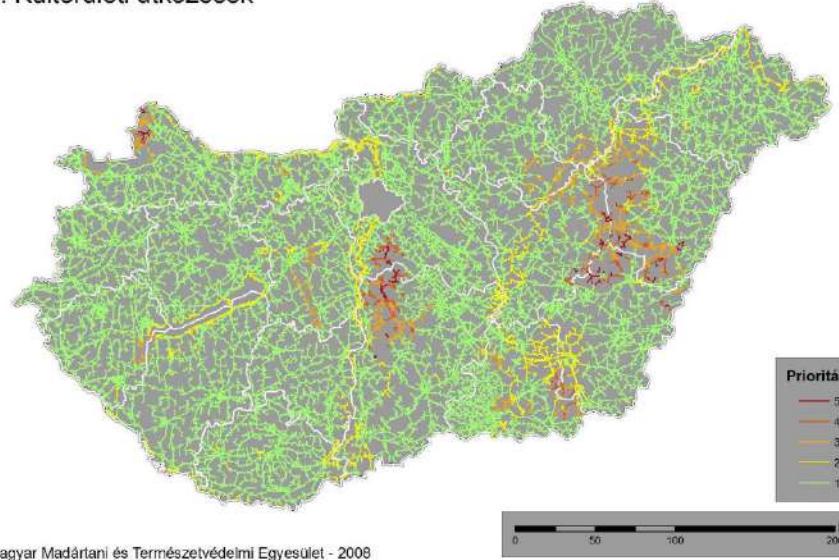

- New database on bird distribution (precision & changes)
- New registry of electric grid (precision & changes)
- New database on habitat structure
- „Fine tuning” of methodology

Védett madárfajokat veszélyeztető középfeszültségű vezetékhálózat:
1. Külterületi áramütések

Magyar Madártani és Természetvédelmi Egyesület - 2008

Védett madárfajokat veszélyeztető középfeszültségű vezetékhálózat:
3. Külterületi ütközések

Magyar Madártani és Természetvédelmi Egyesület - 2008

Methods

- The base for the national model was the:
 - I. Distribution of priority bird species (probability of occurrence)
- Known mortality data is highly dependent on local survey efforts
 - NOT suitable for spatial modelling in national scale
 - BUT suitable for estimating the magnitude of species specific effects
 - AND suitable for estimating effects of:
 - II. Microhabitat**
 - III. Pole structure/type**
 - IV. Mitigation measures**

I. Distribution of priority bird species

II. Microhabitat around the pole/powerline

III. Pole structure/type

IV. Applied bird-friendly solution

Steps

I. Distribution of priority bird species

II. Microhabitat around the pole/powerline

III. Pole structure/type

IV. Applied bird-friendly solution

I.

I. Distribution of priority bird species

- I.1 Select species and define the species' relative weight**
- I.2 Define the distribution of selected species
- I.3 Define the cumulative priority map of threatened species

I.1 Weighting the species - Methodology

RELATIVE WEIGHT OF BIRD SPECIES		CONSERAVATION STATUS				
		Globally threatened (IUCN: CR, EN, VU, NT, EU: spec 1)	Threatened in Europe (EU: spec2, spec 3)	Threatened in Hungary (HU: CR, EN, VU, NT)	Protected in Hungary	Not protected in Hungary
Population-level effect	Critical threat on population (found carcass/mature individual >5%)	5	5	4	3	0
	Threat on population (found carcass/mature individual >1%)	5	4	3	2	0
Individual-level effect	Critically high individual mortality (>5% of found carcasses)	5	4	3	2	0
	High individual mortality (>1% of found carcasses)	4	3	2	1	0
	Individual mortality (>0.1% of found carcasses)	3	2	1	0	0
No effect	No significant mortality (<0.1% of found carcasses)	0	0	0	0	0

I.1 Weighting the species - Electrocution

RELATIVE WEIGHT OF BIRD SPECIES		CONSERAVATION STATUS				
		Globally threatened (IUCN: CR, EN, VU, NT, EU: spec 1)	Threatened in Europe (EU: spec2, spec 3)	Threatened in Hungary (HU: CR, EN, VU, NT)	Protected in Hungary	Not protected in Hungary
RELATIVE EFFECT OF POWERLINES	Population-level effect	Critical threat on population (found carcass/mature individual >5%)		Bubo bubo	Aquila chrysaetos	Ciconia ciconia
		Threat on population (found carcass/mature individual >1%)	Milvus milvus, Aquila heliaca, Falco cherrug	Falco tinnunculus, Coracias garrulus, Tyto alba*	Ciconia nigra, Haliaeetus albicilla, Accipiter gentilis*, Circaetus gallicus	Buteo buteo, Buteo rufinus
	Individual-level effect	Critically high individual mortality (>5% of found carcasses)				
		High individual mortality (>1% of found carcasses)				Corvus frugilegus
	No effect	Individual mortality (>0.1% of found carcasses)	Falco vespertinus		Falco peregrinus, Strix uralensis*	19 species * 3 species has no national database 16 species used

I.1 Weighting the species - Collision

RELATIVE WEIGHT OF BIRD SPECIES		CONSERVATION STATUS				
		Globally threatened (IUCN: CR, EN, VU, NT, EU: spec 1)	Threatened in Europe (EU: spec2, spec 3)	Threatened in Hungary (HU: CR, EN, VU, NT)	Protected in Hungary	Not protected in Hungary
RELATIVE EFFECT OF POWERLINES	Critical threat on population (found carcass/mature individual >5%)	Otis tarda				
	Threat on population (found carcass/mature individual >1%)					
	Critically high individual mortality (>5% of found carcasses)				Grus grus	
	High individual mortality (>1% of found carcasses)	Waterbirds*	Waterbirds*	Waterbirds*	Ciconia ciconia Waterbirds*	
	Individual mortality (>0.1% of found carcasses)				3 species * 1 group with average weight „3”	
No effect	No significant mortality (<0.1% of found carcasses)					

I. Distribution of priority bird species

- I.1 Select species and define the species' relative weight
- I.2 Define the distribution of selected species**
- I.3 Define the cumulative priority map of threatened species

I.2 Define the distribution of selected species

- The best available datasets (MME - Nat. Park Dir. cooperation):
 - Birdatlas Program (MAP)
 - Common Bird Monitoring (MMM)
 - Waterbird Database
 - Species specific database (breeding, observation)
- 2,5 x 2,5 km UTM grid cells (15,442 cells for Hungary)
- 5 categories for estimating the probability occurrence:

1: not significant habitat
2: occasionally used habitat
3: frequently used habitat
4: important habitat (breeding, settlement)
5: most important habitats (hotspots)

I.2 Define the distribution of selected species

- limitation of available data (unequal survey effort) and high dispersal capacity of birds
- therefore we also extrapolated data to the surrounding quadrats (decreased by distance)

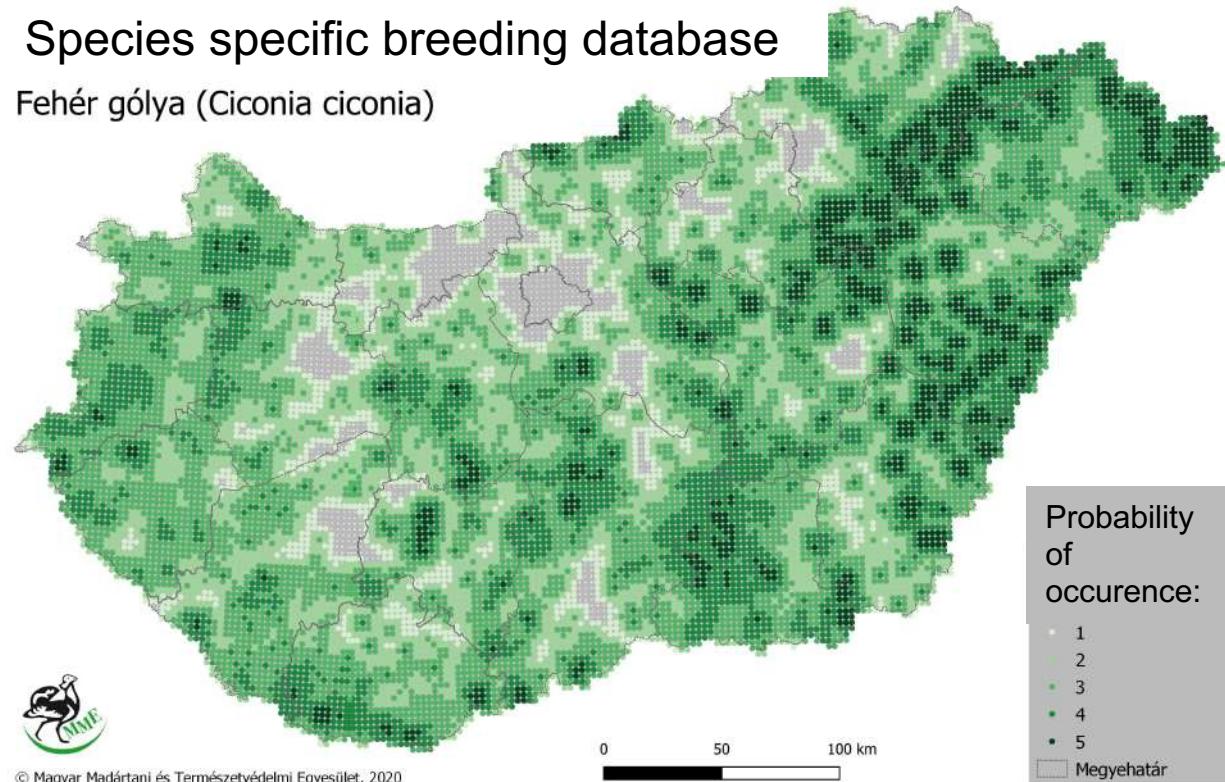

RELATIVE WEIGHT OF UTM QUADRATS FOR THE SELECTED BIRD SPECIES		DATA WITHIN THE UTM QUADRAT				
		Very high breeding/presence probability	High breeding/presence probability	Medium breeding/presence probability	Low breeding/presence probability	Very low breeding/presence probability
DATA IN THE SURROUNDINGS OF THE UTM QUADRAT	0 km	5	5	4	3	0
	2.5 km	5	4	3	2	0
	5 km	4	3	2	1	0
	7.5 km	3	2	1	0	0
	10 km	2	1	0	0	0
	>10 km	0	0	0	0	0

I.2 Define the distribution of selected species

© Kókay Szabolcs - MME - www.mme.hu

White stork
Species specific breeding database
Fehér gólya (*Ciconia ciconia*)

	Very high breeding/presence probability	High breeding/presence probability	Medium breeding/presence probability	Low breeding/presence probability	Very low breeding/presence probability
<i>Ciconia ciconia</i>	very high (annually >10 pairs)	high (annually 6-10 pairs)	medium (annually 2-5 pairs)	occasionally or low (min 1 pair in every 5 years)	rarely (1 pair in >5 years) or no data

I.2 Define the distribution of selected species

Great Bustard

Species specific observation database

Túzok (*Otis tarda*)

	Very high breeding/presence probability	High breeding/presence probability	Medium breeding/presence probability	Low breeding/presence probability	Very low breeding/presence probability
Otis tarda	very high (>10000 observed specimens)	high (1001-10000 observed specimens)	medium (101-1000 observed specimens)	occasionally or low (2-100 observed specimens)	rarely (max 1 pld) or no data

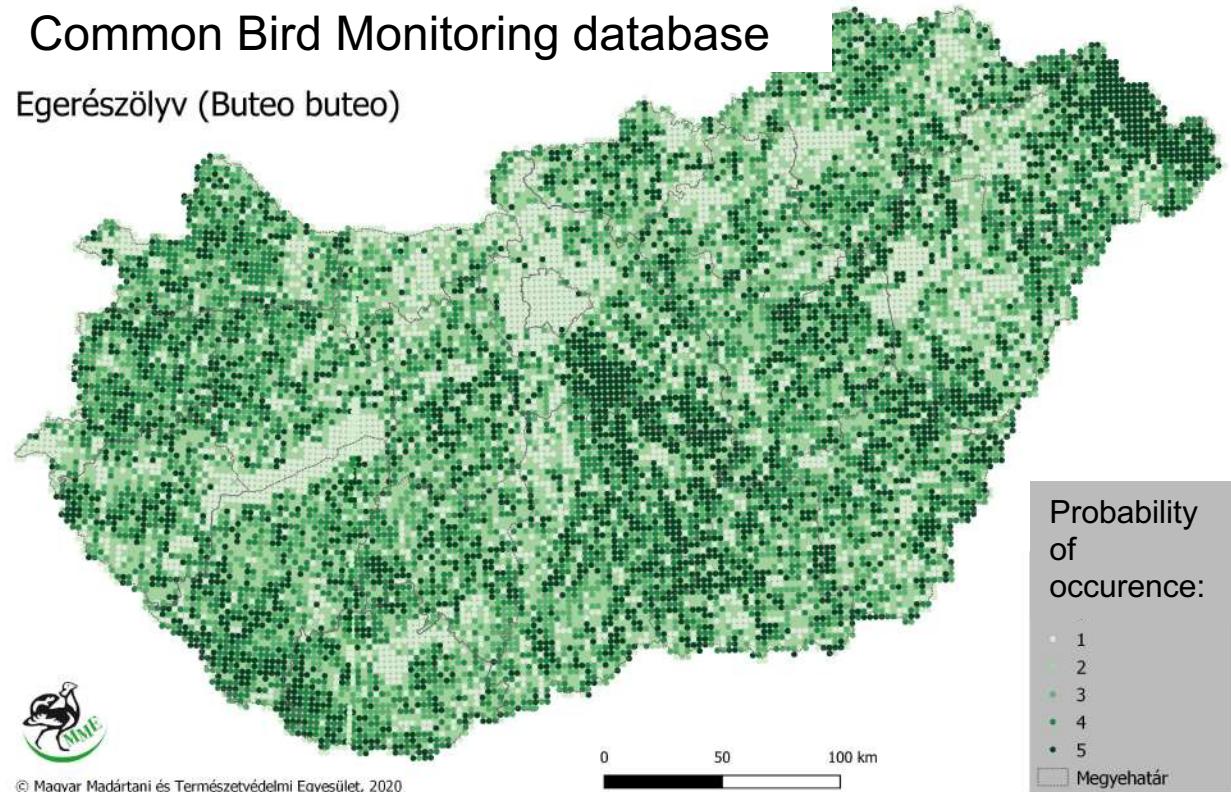

I.2 Define the distribution of selected species

Buzzard

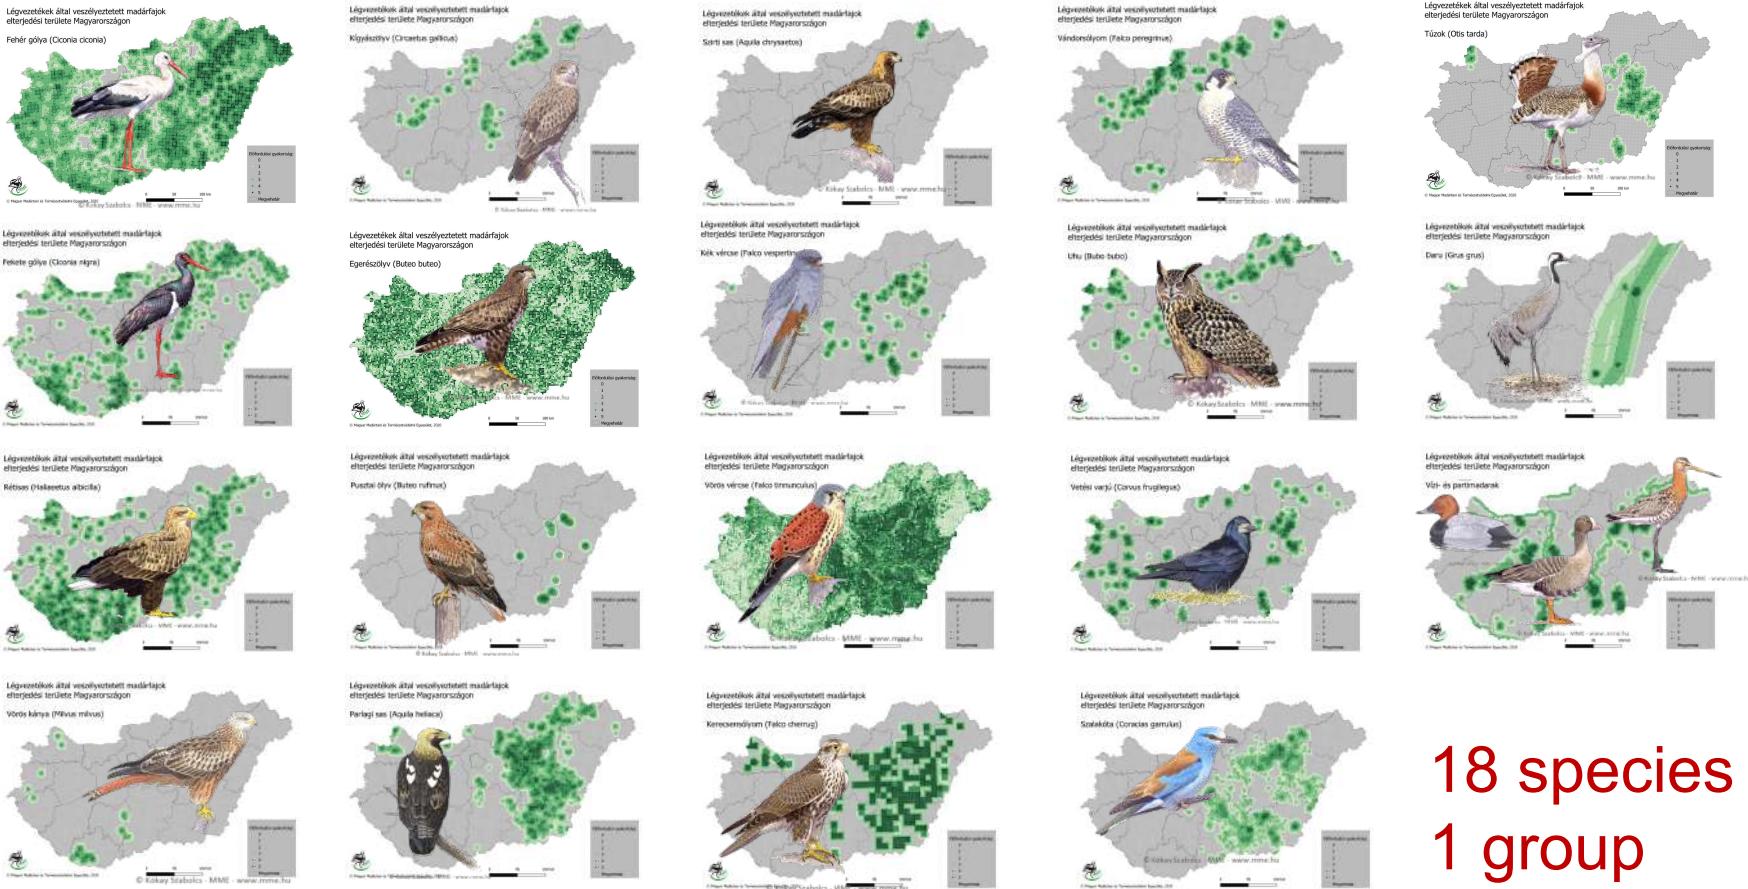

Common Bird Monitoring database

Egerészölyv (*Buteo buteo*)

	Very high breeding/presence probability	High breeding/presence probability	Medium breeding/presence probability	Low breeding/presence probability	Very low breeding/presence probability
<i>Buteo buteo</i>	very high (probability min 0.8 percentile)	high (probability min 0.6 percentile)	medium (probability min 0.4 percentile)	low (probability min 0.2 percentile)	very low (probability <0.2 percentile)

I.2 Define the distribution of selected species

18 species
1 group

I. Distribution of priority bird species

- I.1 Select species and define the species' relative weight
- I.2 Define the distribution of selected species
- I.3 **Define the cumulative priority map of threatened species**

I.3 Cumulative priority map of threatened species

We summed up the probability values of each species multiplied by it's relative weight for each UTM grid cell

Electrocution:

$$\sum_{i=1}^{16} \text{Species}_i \text{ (Probability of occurrence} \times \text{Relative weight})$$

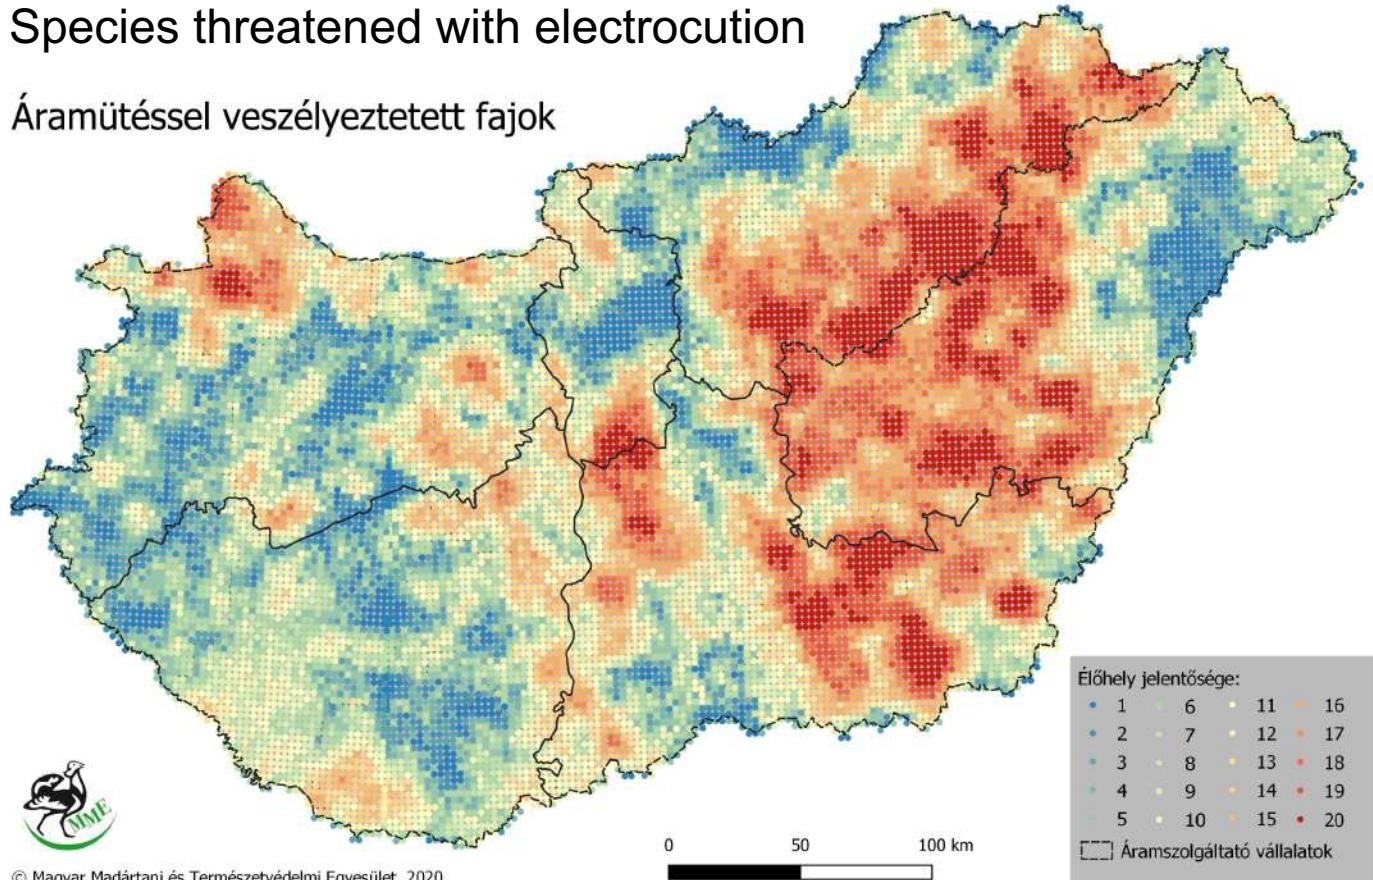

Collision:

$$\sum_{i=1}^4 \text{Species}_i \text{ (Probability of occurrence} \times \text{Relative weight})$$

I.3 Cumulative priority map of threatened species

Species threatened with electrocution

II. Microhabitat around the pylon

- 50m radius buffer around pylon (usually no or minimal overlap)
- 6 categories:
 - Dominant 5 main types:
 >50% coverage
 - Mixed habitats:
 <50% coverage for any types

Artificial/Industrial
(1110-1420)

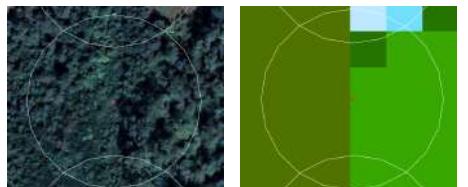

Agriculture
(2100-2310)

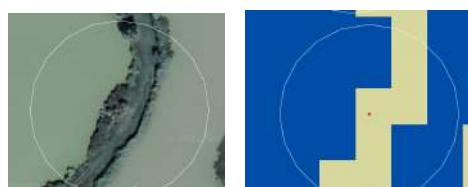

Grassland
(3110-3500)

Forest
(4101-4600)

Wetland/Water
(5110-6200)

Mix

II. Microhabitat around the pylon

- Electrocution: detailed surveys in Heves-Borsod Plain (Péter Tóth, 2012-2017)
- Collision: no dataset available

Main habitat type (50 m)	Surveyed pylons	Controls	Carcass	Mortality rate per pylon	Relative risk of type	Risk category
Grassland	1235	2229	85	4.19%	234%	5
Wetland	305	619	17	2.90%	162%	4
Agricultural area	6293	11236	255	2.36%	132%	3
Forest	283	556	7	1.53%	85%	2
Mixed habitat	968	1773	16	0.91%	51%	2
Artificial	4289	8098	33	0.41%	23%	1
Total	13373	24511	413	1.79%	100%	

Steps

I. Distribution of priority bird species

II. Microhabitat around the pole/powerline

III. Pole structure/type

IV. Applied bird-friendly solution

III. Pole or powerline structure/type

- Electrocution: detailed surveys in Heves-Borsod Plain (Péter Tóth, 2012-2017)
- Collision: no dataset available

Main pylon type	Surveyed pylons	Controls	Carcass	Mortality rate per pylon	Relative risk of type	Risk category
Suspender horizontal	367	730	67	9.13%	492%	5
Other mixed type	135	268	15	5.56%	300%	4
Suspender triangle	234	462	15	3.63%	196%	3
Switch tower	851	1691	34	2.12%	114%	2
Transformator station	495	974	11	1.31%	71%	1
Normal	4464	8870	86	1.06%	57%	1
Total	6546	12995	228	1.85%	100%	

Steps

I. Distribution of priority bird species

II. Microhabitat around the pole/powerline

III. Pole structure/type

IV. Applied bird-friendly solution

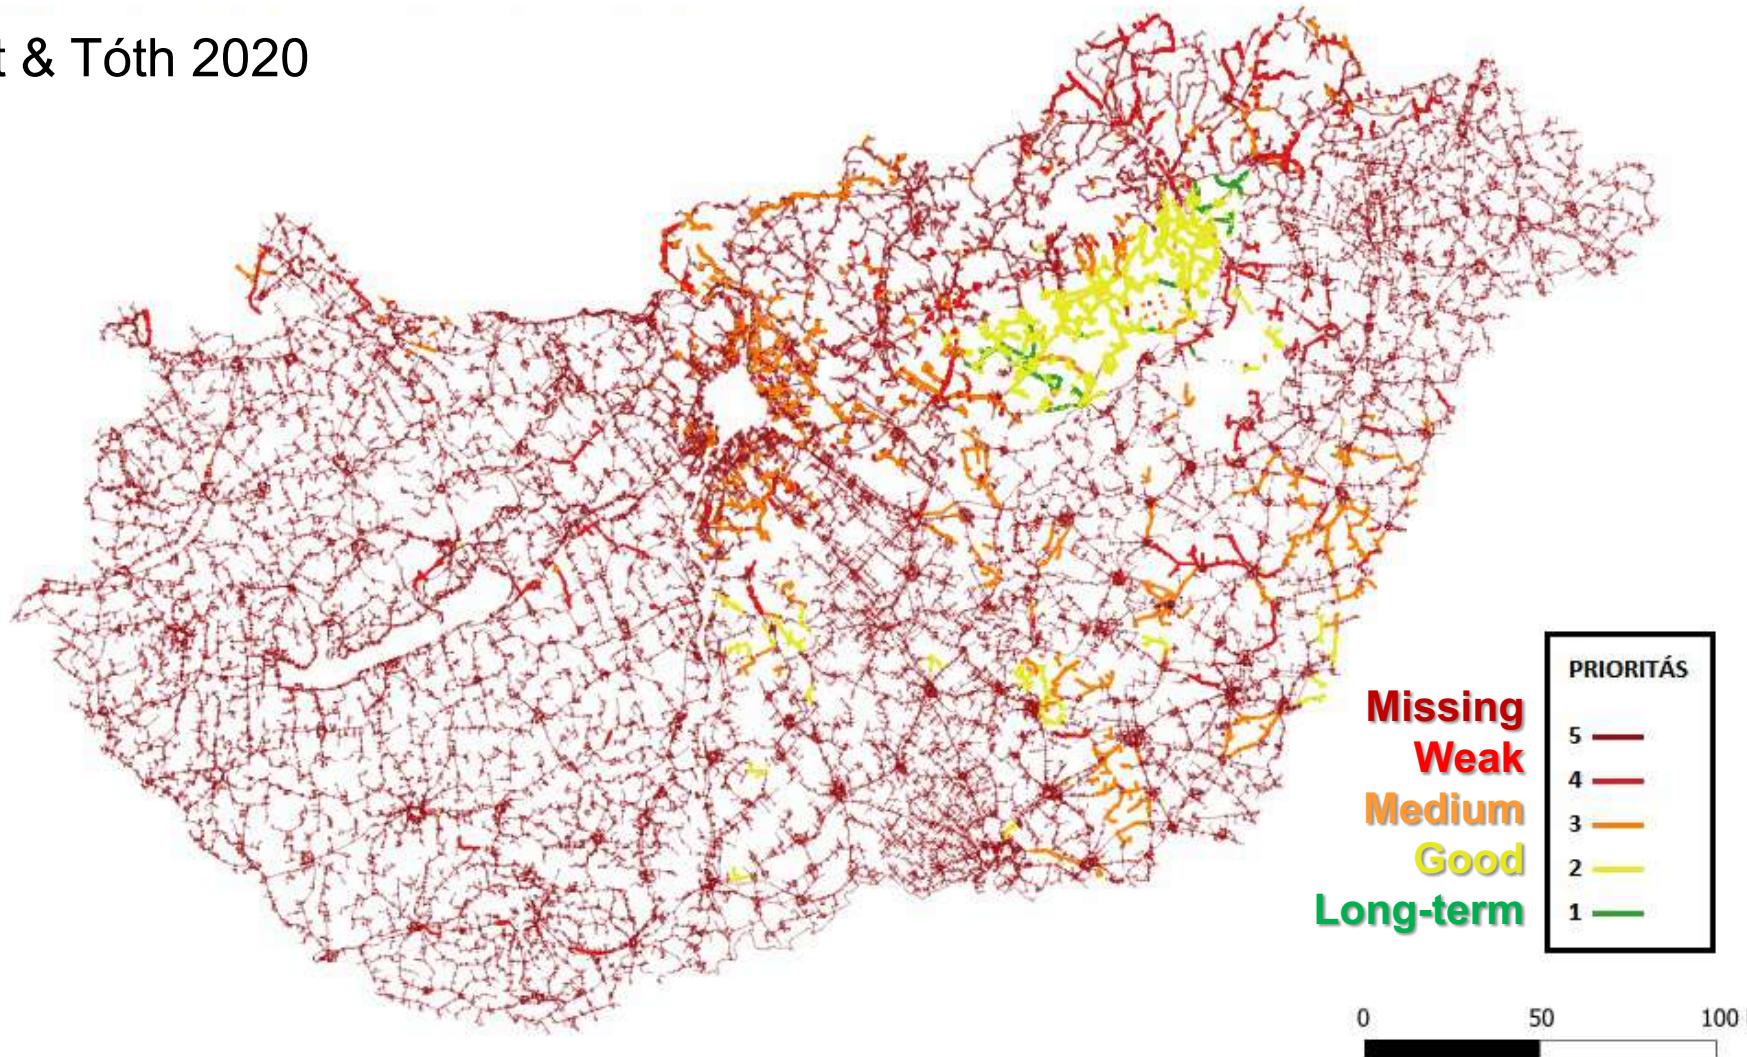

IV. Applied bird-friendly solution

- Specific project (KEHOP-4.3.0-VEKOP-15-2016-00001) to survey available data (Solt & Tóth 2020)

5	Not mitigated OR no data available
4	Crossarm cover
3	Various solutions with limited precision
2	Best known mitigation measure on dangerous pylon
1	New, birdfriendly pylon type

IV. Applied bird-friendly solution

Solt & Tóth 2020
