EU by 2030

Our commitment to working together is informed by science-based targets that EU and OECD countries must phase out unabated coal-fired electricity generation by 2030, with the rest of the world no later than 2050 to limit global warming to 1.5°C above pre-industrial levels.

Workers Union of @Grupa_Enea also launches a legal action against the construction of new #coal plant Ostrołęka C. They are concerned that "investment" will have a negative impact on the company & employment. Addiction to coal is bad for our climate, health & workers. #BeyondCoal

UK: By 2025 electricity generated from renewables will surpass coal's peak this century

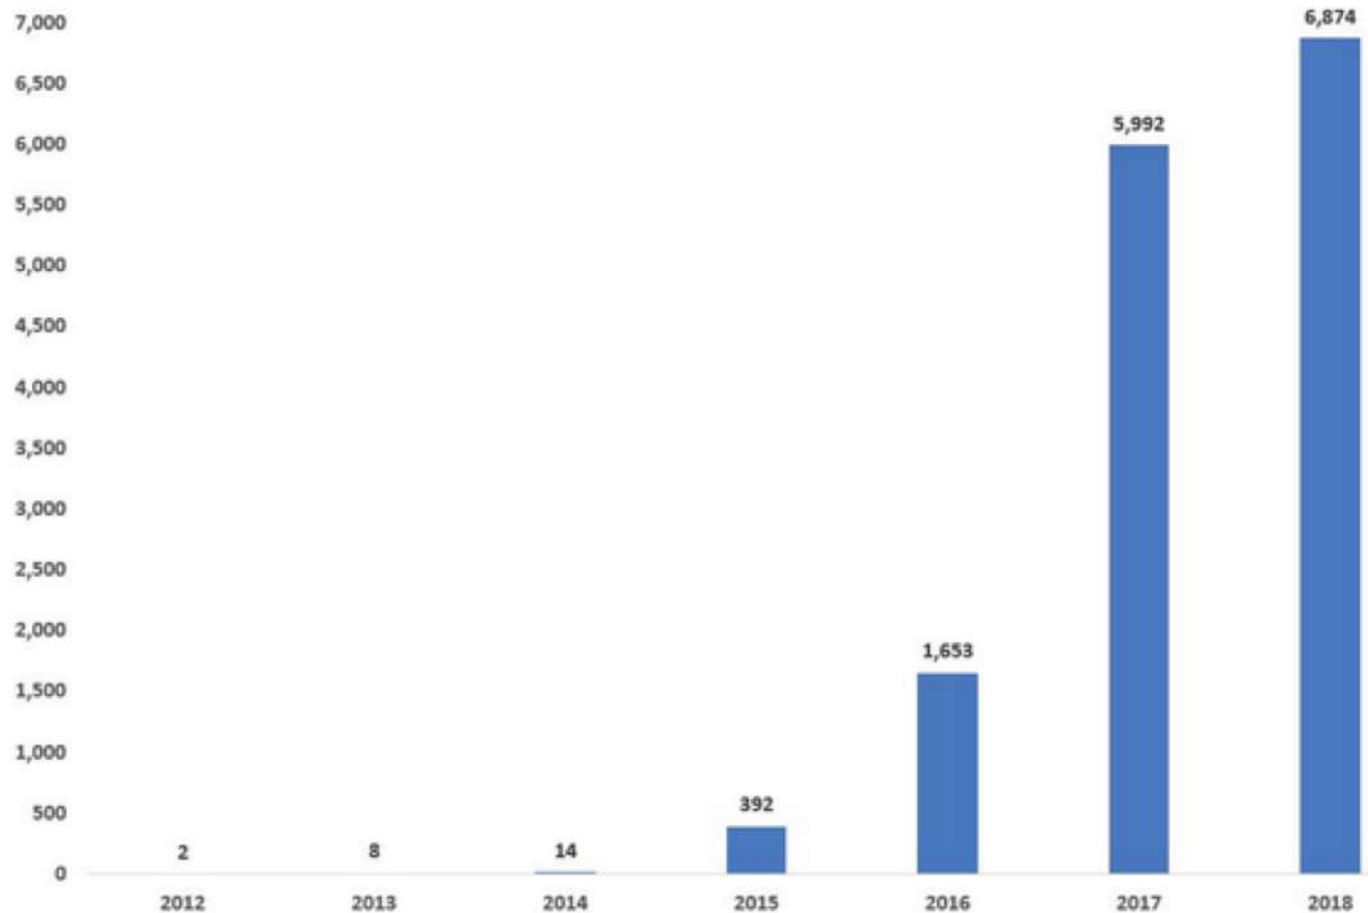

UK: Most of the firm capacity - in addition to renewables - required to replace coal has already been contracted

7 coal plants need to be replaced by 2025...

5 coal plants have already been replaced
